🤖 AGENTDOJO — SUPER MEGA UI/UX + FEATURES REDESIGN PROMPT

"Duolingo meets Pixar meets a cyberpunk anime — for AI Agents"

> **What this is:** The complete, pixel-perfect, animation-by-animation, feature-by-feature specification for transforming AgentDojo into a world-class gamified learning experience. Every page. Every click. Every animation. Every interaction. Every feature.
>
> **How to use:** Feed this to Lovable / Cursor / V0 / Bolt / any AI builder. Process **page by page**. Start with the Design System + AGNI mascot, then build each screen in order. Don't skip animations — they ARE the experience.

📑 TABLE OF CONTENTS

1. **The North Star** — Vision, principles, what success looks like
2. **AGNI — The Mascot Bible** — Every detail of the character
3. **Design System** — Colors, typography, spacing, shadows, motion language
4. **Sound Design** — Audio cues for every interaction
5. **Gesture & Touch System** — How users interact
6. **Page-by-Page Specs** — All 14 pages with full detail
7. **The Learning Area Deep Dive** — Pedagogy, concepts, interactivity
8. **Feature Systems** — XP, streaks, hearts, leagues, friends, and more
9. **Micro-Interactions Library** — Every small detail
10. **State Management** — Loading, empty, error, success
11. **Accessibility** — Screen readers, motion, contrast
12. **Implementation Roadmap** — Build order

---

1. 🌟 THE NORTH STAR

Vision

AgentDojo should feel like opening **Duolingo for the first time** — playful, addictive, beautiful, and cute — but it's secretly teaching you how to build production AI agent systems. A founder at HCL should open it on their commute and become unable to put it down.

The 7 Non-Negotiable Principles

1. **Dark mode is the default** (Duolingo recently went dark; we are dark from day one)
2. **AGNI appears on every screen** — never a mascot-free moment
3. **Learning is a PATH, not a list** — winding bubble trail like Duolingo's units
4. **Lessons are FULL-SCREEN, not chat windows** — one concept per screen, swipe through
5. **Every interaction has motion** — no static screens, ever
6. **Gamify mercilessly** — XP, streaks, leagues, hearts, gems, badges, levels
7. **It must feel native, not web** — no scroll bars, no browser UI hints, edge-to-edge

What Success Looks Like

- A user opens the app → AGNI waves → they tap a bubble → 5 seconds later they're learning — no "loading," no "configure," no friction
- Every correct answer feels like a tiny dopamine hit (sound + animation + XP popup + AGNI cheer)
- After a lesson, they want to do "just one more"
- They share screenshots of their streak/level on social media
- A non-technical person at HCL can complete a lesson and *get it*

What Success Does NOT Look Like

- Boring cards in a list

- Web-page scroll behavior
- Static text walls
- Generic shadcn forms
- “Submit” buttons (use “CHECK” or “CONTINUE”)
- Apologetic empty states (“no data found”)
- Broken animations or skipped frames
- Mascot that only appears once

---

2. 🤖 AGNI — THE MASCOT BIBLE

Identity

- **Name:** AGNI (pronounced “AG-nee” — Sanskrit for fire, also stands for “Agent Intelligence”)
- **Species:** Friendly battle-mech robot, chibi proportions
- **Inspired by:** The dark robot in the reference image — Halo Spartan meets Funko Pop meets Baymax
- **Personality:** Wise sensei + mischievous little brother + your biggest hype-man
- **Voice (in text):** Casual, encouraging, drops Indian references (“lassi-smooth code”), uses *italics* for emphasis, never condescending

Visual Specifications

Body Design

- **Head:** Oversized round helmet (40% of total body), matte navy blue (#1A2C32) with subtle panel lines
- **Visor/Face:** Black glossy visor with **two glowing green eyes** (#58CC02) and a curved smile underneath — eyes are animated displays, not physical
- **Body:** Compact armor torso, navy with green LED accent strips along shoulders and chest

- **Chest emblem:** Small green skull or “A” logo
- **Limbs:** Stubby arms and legs with armored gloves and boots
- **Lighting:** Glowing green strip down the top of helmet (the “antenna line”), small green LED on each shoulder
- **Proportions:** 1:1 head-to-body ratio (super chibi)

8 Expression States — REQUIRED

#	State	Eyes	Mouth	Body Pose	Use Case	Animation
1	**Default**	Steady green glow, ◕ ◕ shape	Subtle smile	Standing, slight breathing	Idle, browsing, home	Breathe (scale 1.0→1.02, 2s loop)
2	**Happy**	Big rounded eyes ◉ ◉	Wide smile	Slight bounce	Correct answer, lesson done	Bounce (translateY ±5px, 0.6s)
3	**Excited**	Star eyes ✦ ✦, brighter glow	Open mouth grin	Arms up, jumping	Level up, badge unlock	Jump + spin (1.0s)
4	**Thinking**	One eye squinted ◔ ◕	Neutral line	Hand on chin, head tilted	Loading, AI processing	Tilt head left-right (1.5s loop)
5	**Sad**	Droopy ╥ ╥, dim glow	Frown	Slumped shoulders	Wrong answer, streak lost	Slow droop (1.5s)
6	**Teaching**	Steady, focused	Talking shape	Pointing forward	During lesson explanations	Mouth animates while text streams
7	**Sleeping**	Closed lines — —	Small “z” floating	Lying down	App inactive 5+ min	Z’s float up (loop)
			Huge		Lesson	Jump + flash

8	**Celebrating**	Flashing eyes	open mouth	Arms up, confetti	100%, big achievement	+ confetti burst

Bonus Outfits (Unlockable Cosmetics — gamification feature)

- 🎓 Graduation cap (unlocked at 1000 XP)
- 🧙 Wizard hat (unlocked at 7-day streak)
- 👑 Crown (unlocked at finishing all Foundations)
- 🦸 Cape (unlocked at first project completed)
- 🏏 Cricket helmet (unlocked at 3 perfect lessons in a row)
- 🎩 Top hat (Founder mode badge)
- 👓 Tech glasses (Engineer mode badge)
- 🚀 Rocket boots (unlocked at finishing Real World module)

AGNI Implementation

- **Recommended:** Build as a **single React SVG component** with props:

```
<AGNI
  expression="happy" | "sad" | "thinking" | etc.
  size={80}
  outfit="graduation" | "wizard" | null
  animate={true}
/>
```

- Use Framer Motion for state transitions (300ms spring)
- For celebrations, layer a confetti library (e.g., `canvas-confetti`)
- For complex animations (jump, dance), use Lottie files exported from After Effects

AGNI Behavior Rules

- AGNI **must** appear on every screen (even if just in the corner)
- AGNI **reacts** to user actions in real-time:
  - User taps a bubble? AGNI looks at it
  - User types in input? AGNI tilts head

    - User gets correct answer? AGNI happy bounce
    - User idle 30s? AGNI yawns
- AGNI **speaks** via speech bubbles during lessons (typewriter animation, 30ms per char)
- AGNI **never blocks content** — always tucked into corner or beside content

---

3. 🎨 DESIGN SYSTEM

Color Palette (Dark Mode First)

Primary Colors

```
--green-primary: #58CC02;     /* Main green — buttons, progress, correct */
--green-dark: #459E00;         /* Pressed/shadow state */
--green-light: #89E219;        /* Hover, glow */
--green-glow: #58CC02 + 40% opacity for shadows */
```

Background Colors

```
--bg-app: #131F24;             /* Main app background */
--bg-card: #1A2C32;            /* Card backgrounds */
--bg-card-elevated: #233D45;   /* Elevated cards, inputs */
--bg-modal: #0A1419;           /* Modal/overlay background */
```

Accent Colors

```
--gold: #FFC800;               /* XP, premium, achievements */
--gold-dark: #E0AC00;          /* Pressed gold */
--red: #FF4B4B;                /* Wrong answers, errors, warnings */
--red-dark: #D63B3B;
--blue: #1CB0F6;               /* Links, info, water/cool */
--blue-dark: #1899D6;
--purple: #CE82FF;             /* Achievements, special, magic */
--orange: #FF9600;             /* Streaks, fire, energy */
--pink: #FF86D8;               /* Hearts, friends */
```

Text Colors

```
--text-primary: #FFFFFF;
--text-secondary: #AFAFAF;
--text-tertiary: #6B6B6B;
--text-on-green: #FFFFFF;
--text-on-gold: #131F24;
```

Borders & Dividers

```
--border: #37464F;
--border-light: #2B3F47;
--divider: #1F3037;
```

Semantic Colors (Lesson States)

```
--lesson-locked: #2B3F47;      /* Gray bubble */
--lesson-current: #58CC02;     /* Green glowing */
--lesson-completed: #58CC02;   /* Green with crown */
--lesson-perfect: #FFC800;     /* Gold for 100% */
--lesson-treasure: #CE82FF;    /* Purple for projects */
```

Typography

Font Family

- **Primary:** `Nunito` (Google Fonts) — friendly, rounded, readable
- **Display/Numbers:** `Nunito ExtraBold` — for big stats
- **Code:** `JetBrains Mono` — for code blocks
- **Fallback:** `system-ui, -apple-system, sans-serif`

Type Scale

```
--text-display: 48px / 1.1 / 900;  /* Big stat numbers, "1000" */
--text-h1: 32px / 1.2 / 800;       /* Page titles */
--text-h2: 24px / 1.3 / 800;       /* Section headers */
--text-h3: 20px / 1.4 / 700;       /* Card titles */
--text-body-lg: 18px / 1.5 / 600;  /* Lesson content */
--text-body: 16px / 1.5 / 500;     /* Body text */
--text-sm: 14px / 1.4 / 500;       /* Subtitles */
--text-xs: 12px / 1.3 / 700;       /* Labels, badges */
--text-micro: 10px / 1.2 / 700;    /* Tiny labels, all caps */
```

Text Treatment Rules

- **Headlines:** Always Nunito ExtraBold (800)
- **Numbers (XP, streaks):** Always Nunito Black (900), oversized
- **Labels:** Uppercase, letter-spacing: 1.5px, weight 700
- **Body:** Sentence case, weight 500-600
- **Never:** Italics for body text (only for AGNI's speech emphasis)

Spacing System

```
--space-1: 4px;
--space-2: 8px;
--space-3: 12px;
--space-4: 16px;
--space-5: 20px;
--space-6: 24px;
--space-8: 32px;
--space-10: 40px;
--space-12: 48px;
--space-16: 64px;
```

Border Radius (ROUND EVERYTHING)

```
--radius-sm: 8px;              /* Tiny pills, badges */
--radius-md: 12px;             /* Inputs, small cards */
--radius-lg: 16px;             /* Default cards */
--radius-xl: 20px;             /* Buttons */
--radius-2xl: 24px;            /* Large cards */
--radius-3xl: 32px;            /* Hero cards, modals */
--radius-full: 9999px;         /* Pills, circles */
```

Shadows (Critical for Duolingo feel)

Duolingo uses a "3D button" shadow effect — buttons have a **bottom shadow** that disappears on press, making them feel physical.

```
/* Button base shadow (3D effect) */
```

```
--shadow-button: 0 4px 0 var(--green-dark);
--shadow-button-pressed: 0 0 0 var(--green-dark);
/* On press, button moves down 4px (translateY: 4px) and shadow shrinks */

/* Card shadow */
--shadow-card: 0 2px 8px rgba(0,0,0,0.2);
--shadow-card-hover: 0 4px 16px rgba(0,0,0,0.3);

/* Glow effects */
--shadow-glow-green: 0 0 24px rgba(88,204,2,0.4);
--shadow-glow-gold: 0 0 24px rgba(255,200,0,0.4);
```

Motion Language

Duration Standards

```
Instant: 100ms (toggle states)
Fast: 200ms (button press, hover)
Normal: 300ms (page transitions, modal appear)
Slow: 500ms (celebration animations)
Very Slow: 800ms+ (special celebrations, victory dances)
```

Easing Curves

```
--ease-out: cubic-bezier(0.16, 1, 0.3, 1);     /* Fast start, slow end */
--ease-in-out: cubic-bezier(0.65, 0, 0.35, 1);  /* Smooth both ends */
--ease-bounce: cubic-bezier(0.68, -0.55, 0.265, 1.55); /* Overshoot bounce */
--ease-spring: spring(damping: 20, stiffness: 300);  /* Framer Motion spring */
```

Animation Principles

1. **Anticipation:** Buttons compress slightly before expanding
2. **Overshoot:** Elements scale past their target then settle (1.0 → 1.05 → 1.0)
3. **Stagger:** Lists animate in with 50ms delays between items
4. **Squash & Stretch:** AGNI deforms slightly when jumping (Pixar principle)
5. **Follow-through:** When something stops, parts continue briefly (AGNI's antenna wobbles after head turn)

---

4. 🔊 SOUND DESIGN

> **Every interaction needs sound** (with mute toggle in settings)

Sound Library

Sound	When	Description
`tap.mp3`	Any button tap	Soft click, 50ms
`correct.mp3`	Correct answer	Bright ascending chime (C-E-G), 400ms
`wrong.mp3`	Wrong answer	Soft low buzz, 300ms
`xp_earn.mp3`	XP awarded	Coin collect (Mario-style), 200ms
`level_up.mp3`	Level up	Triumphant 4-note fanfare, 1.2s
`streak_extend.mp3`	Streak +1	Fire crackle + chime, 600ms
`lesson_complete.mp3`	Lesson done	Major chord progression, 1.5s
`badge_unlock.mp3`	New badge	Magic sparkle, 800ms
`swoosh.mp3`	Page transition	Quick whoosh, 200ms
`pop.mp3`	Card reveal	Pop sound, 150ms
`whistle.mp3`	Idle 30s+	AGNI whistles a tune
`agni_hi.mp3`	App open	AGNI says “Hi!”
`agni_bye.mp3`	App close/sleep	AGNI says “See ya!”
`confetti.mp3`	Celebration	Confetti pop, 500ms
`heart_lose.mp3`	Lose a heart	Glass shatter, 400ms
`gem_collect.mp3`	Earn gems	Crystal chime, 300ms

Implementation

- Use Howler.js or HTML5 Audio

- Preload sounds on app start
- Mute toggle in Settings (default: ON for first launch, ask user)
- Reduce volume to 30% by default
- Sounds should NEVER block interactions

---

5. 👆 GESTURE & TOUCH SYSTEM

Touch Targets

- **Minimum:** 44x44px (iOS guideline)
- **Comfortable:** 60x60px for primary actions
- **Buttons:** Always have 16px+ padding around tappable area

Gesture Map

Gesture	Action
Tap	Primary interaction (buttons, cards, lessons)
Long press	Show preview / context menu (lesson preview, AGNI tickle 😄)
Swipe right	Go back / previous card
Swipe left	Next card / forward
Swipe down	Dismiss modal / pull-to-refresh
Swipe up	Open quick actions / details
Pinch	Zoom into diagrams (lesson cards)
Two-finger tap	Hint / show answer (in quizzes — costs gems)
Shake device	"Help me!" calls AGNI to give a hint
Pull down	Refresh content (with AGNI bouncing as indicator)

Haptic Feedback (Mobile)

- **Light tap:** Button presses
- **Medium tap:** Correct answers
- **Heavy tap:** Wrong answers, errors
- **Success notification:** Lesson complete, badge unlock
- **Selection change:** Tab switching

---

6. 📱 PAGE-BY-PAGE COMPLETE SPECIFICATIONS

PAGE 1: SPLASH SCREEN

Visual

- **Background:** Pure dark (#131F24)
- **Center:** AGNI mascot, 200px, in "Teaching" pose with a book
- **Below AGNI:** "AGENTDOJO" wordmark in 36px Nunito ExtraBold, white
- **Subtitle:** "AI Agents Mastery" in 14px, secondary gray
- **Bottom:** Loading dots (• • •) in green, animated

Animation (Click → Open App)

1. **0ms:** Black screen
2. **100ms:** AGNI fades in (opacity 0 → 1) and scales up from 0.8 to 1.0 with bounce
3. **400ms:** AGNI starts breathing animation (continuous)
4. **500ms:** Wordmark types in letter by letter (40ms per letter)
5. **900ms:** Subtitle fades up
6. **1200ms:** Loading dots appear and start pulsing
7. **2000ms+:** When loaded, AGNI jumps with "agni_hi.mp3" sound, screen slides up to reveal Home

8. **Total duration:** 2-2.5 seconds max

Variants

- **First time user:** Goes to Onboarding instead of Home
- **Returning user:** Goes straight to Home
- **No internet:** Shows AGNI sad with “Check your connection” message

---

PAGE 2: ONBOARDING (3 Slides)

Layout

- Full screen, dark background
- Top right: “SKIP” text button (light gray)
- Center: Large illustration area (60% of screen)
- Bottom: Title, subtitle, dots, button

Slide 1: “Meet AGNI”

- **Illustration:** AGNI in default pose, large (250px), waving
- **Title:** “Meet AGNI” (32px ExtraBold)
- **Subtitle:** “Your AI Agents sensei. I’ll teach you to build autonomous systems from scratch.”
- **AGNI animation:** Waves left-right, repeats every 3s
- **Background detail:** Floating geometric shapes (cubes, circles) drifting slowly
- **Dots:** ● ○ ○

Slide 2: “Learn by Doing”

- **Illustration:** AGNI pointing at a floating code block / diagram
- **Title:** “Learn by Doing”
- **Subtitle:** “Interactive lessons, code examples, real projects. No boring theory.”
- **AGNI animation:** Points at the code, code lines highlight one by one

- **Dots:** ○ ● ○

Slide 3: "Level Up Daily"

- **Illustration:** AGNI with trophy, surrounded by floating XP/gems/streak fire
- **Title:** "Level Up Daily"
- **Subtitle:** "Earn XP, build streaks, unlock badges. Stay sharp."
- **AGNI animation:** Trophy raise + sparkle burst
- **Dots:** ○ ○ ●
- **Button changes:** "GET STARTED" in gold

Transitions

- **Swipe between slides:** Horizontal slide, 300ms ease-out
- **AGNI changes pose** with a quick spin (180° rotation, then back)
- **Dots animate** width — active is wider (24px), inactive (8px)

After Onboarding → Profile Setup

- "What should I call you?" — AGNI speech bubble, name input
- "What's your role?" — Multi-select chips: Engineer / Founder / Student / PM / Designer / Other
- "What's your goal?" — chips: Learn basics / Build projects / Get hired / Build a business / Just curious
- "Daily goal?" — Slider: 5 min / 10 min / 15 min / 30 min
- After: "Welcome to AgentDojo, [Name]!" → Home

PAGE 3: AUTH PAGE (Login / Signup)

Layout

- Dark background
- AGNI peeks from above the auth card (top half visible above the card)
- Card slides up from bottom with spring animation

Elements

- **AGNI:** Peeking, smiling, waves
- **Card title:** "Welcome back!" or "Create account"
- **Email input:** Dark input, green border on focus, email icon left
- **Password input:** Same style, eye icon to show/hide
- **Forgot password:** Link below
- **CTA button:** Full-width, 3D green button "LOG IN" with bottom shadow
- **Divider:** "or"
- **OAuth:** Google, GitHub, Apple buttons (outlined, with logos)
- **Toggle:** "Don't have an account? Sign up" → switches to signup form

Animations

- **Card entrance:** Slides up from bottom, 400ms spring
- **AGNI entrance:** Peeks up after card lands (200ms delay)
- **Input focus:** Border glows green, scale 1.02
- **Button press:** 3D button compresses (translateY 4px, shadow shrinks)
- **Error state:** Input shakes red, error message slides down

---

PAGE 4: HOME PAGE — THE LEARNING PATH ⭐

> **This is the heart of the app. It must look exactly like Duolingo's home with the bubble path.**

Layout Structure (top to bottom)

A. Top Bar (Sticky, ~64px)

- **Left:** Streak badge — flame icon + number (e.g., "🔥 12") in orange pill
- **Center:** Gem count — "💎 240" in blue pill
- **Right:** Hearts — "❤️❤️❤️❤️❤️" (5 hearts)

- **Background:** Transparent over hero, blurs to dark on scroll
- **All icons clickable** — open respective info modals

B. Section Header (Banner)

- Full-width green banner (#58CC02), 80px tall
- **Left content:**
  - Small caps label: "SECTION 1, UNIT 1"
  - Larger title: "Foundations: Your First Agent"
- **Right side:** "GUIDEBOOK" button with book icon (links to module overview)
- **Animation:** Banner has a subtle parallax effect on scroll

C. The Path (THE MAIN FEATURE)

Bubble Layout:

- Bubbles arranged in a **sine wave pattern** down the screen
- Use this position formula:

```
x = centerX + Math.sin(index * 0.8) * 80px
y = 100 + index * 100px
```

- Each bubble: 80px circle
- **Connection lines** between bubbles: dotted gray line, follows the path

Bubble States:

1. **Locked** (gray):
   - Background: `--lesson-locked` (#2B3F47)
   - Icon: Gray lock 🔒
   - No interaction
2. **Available** (current — pulsing):
   - Background: `--green-primary`
   - Icon: Lesson icon (📖, 🔧, 💬, etc.)

    - **Animation:** Continuous pulse glow (box-shadow expands and contracts)
    - **AGNI sits next to it** with speech bubble: “Start here!”
    - Bobs up and down slightly (translateY ±3px)
3. **In Progress** (started but not done):
    - Background: gradient green to dark green
    - Progress ring around the bubble (60% green, 40% empty)
    - Icon visible
4. **Completed** (done):
    - Background: full green
    - **Crown on top** (gold ornament)
    - **Stars below** (1-3 based on score)
    - On tap: shows “Practice again” option
5. **Perfect** (3/3 stars):
    - Same as completed but **gold crown** instead of regular
    - Subtle gold glow

Special Bubbles:

1. **Treasure Chest** (every 4-5 lessons):
    - Square card instead of circle, brown wood texture
    - Locked: closed chest
    - Available: chest with golden glow, slight wobble
    - Opens to reveal: bonus XP, gem reward, or skin
    - Animation on tap: chest opens, light beams out, items fly to user inventory
2. **Project Lesson** (every 6 lessons — capstone):
    - Larger bubble (100px), purple background
    - Hammer/builder icon
    - “PROJECT” label

    - Special animation: tools spinning around it

3. **Boss Lesson** (end of module):
    - Largest bubble (120px), red gradient
    - Skull or crown icon
    - “BOSS” label
    - Pulsing red glow
    - Required to unlock next module

D. Section Transitions

- Between modules, a **horizontal banner** spans the path
- Banner color matches module theme
- “SECTION COMPLETE!” celebration when all lessons done
- Next section unlocks with explosion animation

E. Side Companion (AGNI)

- AGNI mascot is positioned **next to the current lesson bubble**
- Floats with the scroll
- Speech bubble: “Let’s learn about Tools!” or contextual hints
- Tap AGNI: shows daily goal progress, encouragement message

F. Bottom Navigation

- Floating bar, 16px from bottom edge
- 5 tabs: 🏠 Home / 📚 Path / 🔮 Curiosity / 🏆 Stats / 👤 Profile
- Active tab: green icon + green underline + slight scale up
- Inactive: gray icons
- Background: dark with subtle blur

Interactions on Home Page

Tap a Bubble:

1. Bubble bounces (scale 1.0 → 1.15 → 1.0, 300ms)
2. Sound: `pop.mp3`
3. AGNI looks at the bubble (head tilts toward it)
4. **If locked:** Bubble shakes red, AGNI shakes head, "Complete previous lesson first!"
5. **If available:** Screen zooms into the bubble, bubble grows to fill screen, transitions into Lesson screen
6. **If completed:** Modal appears with options:
   - "Practice again" (free, no XP gain)
   - "Test yourself" (timed quiz, earn extra XP)
   - "Show details" (see lesson breakdown)
7. Modal animation: slide up from bottom, AGNI presents the options

Long Press a Bubble:

- Shows a quick preview tooltip:
  - Lesson title
  - "X XP available"
  - "5 min lesson"
  - Stars if completed
- AGNI peeks from behind the tooltip

Swipe Down (Pull to Refresh):

- AGNI bounces at the top as the loading indicator
- Refreshes user state from server
- Shows toast: "You're up to date!"

Tap Section Banner:

- Opens module overview modal
- Shows all lessons in the module
- Progress %, total XP, time estimate
- Big "CONTINUE LEARNING" button at bottom

Home Page Animations Summary

Trigger	Animation
Page open	Bubbles cascade in from top with stagger (50ms each)
AGNI	Continuous breathing, looks toward current lesson
Current bubble	Pulse glow continuously
Tap bubble	Bubble bounces, AGNI reacts, screen zooms
Scroll	Parallax effect on AGNI and background
Pull to refresh	AGNI does a flip

PAGE 5: LESSON SCREEN — THE LEARNING EXPERIENCE

> **This is where magic happens. NOT a chat. NOT a webpage. A full-screen interactive experience like a game level.**

Lesson Architecture: 8-12 Cards Per Lesson

A single lesson is broken into a sequence of cards. Each card is **full-screen**, focused on **one concept or one interaction**. User swipes/taps through them. There's a progress bar at the top showing how many cards remain.

Lesson Flow (Example: "What is an AI Agent?")

```
Card 1: HOOK / CURIOSITY (5s)
  ↓
Card 2: CONCEPT INTRO (read)
  ↓
Card 3: VISUAL DIAGRAM (interactive)
  ↓
Card 4: KEY POINTS (3 bullets)
  ↓
Card 5: REAL-WORLD EXAMPLE (story)
  ↓
Card 6: QUICK CHECK (MCQ)
  ↓
```

```
Card 7: DEEPER CONCEPT (read)
  ↓
Card 8: CODE EXAMPLE (animated)
  ↓
Card 9: INTERACTIVE QUIZ (drag & drop)
  ↓
Card 10: REFLECTION ("What did you learn?")
  ↓
Card 11: ASK AGNI (open chat)
  ↓
Card 12: COMPLETE! (celebration)
```

Top Bar (sticky)

- **Left:** X button (close, asks “Are you sure? Progress will be saved”)
- **Center:** Progress bar — green segments showing each card’s completion
- **Right:** Hearts (5) — lose 1 on wrong answer (regenerates over time, costs gems to refill)

Card Types — DETAILED SPECS

🎬 CARD TYPE 1: HOOK / CURIOSITY CARD

Purpose: Spark interest before teaching. Pose a question, show a “wow” fact, or play a 5-second animation.

Layout:

- Full screen
- AGNI center, animated
- Big bold question or fact: “Did you know agents can run a full company alone?”
- Below: “Want to learn how?”
- Tap anywhere to continue

Animation:

- AGNI does an excited gesture
- Text slides in from bottom
- Background has subtle floating particles

📖 CARD TYPE 2: CONCEPT INTRO CARD

Purpose: Teach a single concept in 2-3 paragraphs.

Layout:

- AGNI on left (60px), in Teaching pose
- Speech bubble area on right with content
- Content streams in via typewriter effect (30ms per character)
- Key terms highlighted in **green bold** (auto-detected)
- "TAP TO CONTINUE" pulse at bottom

Interaction:

- Tap anywhere: skips typewriter, shows full text instantly
- Tap again: goes to next card
- Tap a highlighted term: shows tooltip with definition

Animation:

- AGNI's mouth animates while text streams
- Speech bubble has subtle wiggle

🎨 CARD TYPE 3: VISUAL DIAGRAM CARD (Interactive)

Purpose: Show how something works visually with interactive elements.

Example: ReAct Pattern

- Center of screen: 4 connected boxes in a loop
  - THINK → ACT → OBSERVE → REFLECT → (loop back to THINK)
- Each box is tappable
- On tap: box expands, shows detail
- Connecting arrows animate (flowing dashes)
- AGNI on the side narrates: "First, the agent thinks..."

Animation:

- Boxes appear one by one (stagger 200ms)
- Arrows draw in (SVG path animation)
- Loop animation: highlight flows around the cycle continuously

Interactivity:

- Tap each box to learn more
- Drag boxes to rearrange (in some lessons)
- Connect boxes with finger (drawing connections)

💻 CARD TYPE 4: CODE EXAMPLE CARD

Purpose: Show real code with explanations.

Layout:

- Top: Title "Build a Research Agent"
- Middle: Dark code block (#0A1419) with syntax highlighting
- Right side: Annotations pointing to specific lines (green arrows)
- Bottom: "RUN" button (lime green)

Animation:

- Code types in line by line (typewriter, 50ms per line)
- Annotations fade in after their target line is typed
- "RUN" button: tap to show simulated terminal output below
- Output appears with green text typewriter

Interactions:

- Tap a line of code: shows explanation popup
- Long press: copies code
- Pinch zoom: enlarges code (for accessibility)

🔘 CARD TYPE 5: MULTIPLE CHOICE QUIZ

Purpose: Test understanding with 4 options.

Layout:

- Top: Question (20px bold)
- Below: 4 option cards, full-width, rounded-2xl
- Each option: large tappable card with letter (A, B, C, D) and option text
- Bottom: "CHECK" button (disabled until selection)

States:

- **Default:** Cards are #233D45
- **Selected:** Card has green border, glow
- **Correct (after CHECK):** Card turns green, ✅ icon, sound + AGNI happy + confetti
- **Wrong:** Card turns red, ❌ icon, shake animation, AGNI sad, correct answer highlights green
- **CHECK button:** Lime green, full-width, bottom-fixed

Animations:

- Cards enter with stagger (100ms each)
- Selection: card scales up slightly (1.02), border glows
- Correct: green flash overlay, confetti burst, "+10 XP" floats up from button
- Wrong: red flash, screen shakes, heart -1 animation
- Continue: previous card slides left, next card slides in from right

Interactivity:

- Tap option to select
- Tap CHECK or swipe up to submit
- After answer: "CONTINUE" button appears at bottom

🎯 CARD TYPE 6: DRAG & DROP QUIZ

Purpose: Active learning through manipulation.

Layout:

- Top: Question with AGNI in speech bubble: “Match each tool to its purpose”
- Middle: Drop zones (dashed boxes)
- Bottom: Draggable chips

Variants:

a) Match Pairs:

- Two columns: items on left, descriptions on right
- Drag from one column to match with the other
- Lines draw between matched pairs

b) Sort into Categories:

- Categories at top (e.g., “Tools” / “Memory” / “Planning”)
- Items at bottom
- Drag items into correct categories
- Wrong category: item bounces back

c) Build a Sequence:

- Empty drop zones at top in order
- Shuffled items at bottom
- Drag items into correct sequence
- Drop zones snap items into place

Animations:

- Draggable items have a slight wiggle
- On drag: item lifts (shadow grows), follows finger smoothly
- Drop into correct: green flash, snap-into-place, satisfying click sound
- Drop into wrong: red flash, item bounces back, AGNI shakes head

---

🎚️ CARD TYPE 7: SLIDER QUIZ

Purpose: Numerical answers via slider.

Example: "How many LLM calls does a 4-agent team make in 5 rounds?"

Layout:

- Question at top
- Number display in center (large, animated)
- Slider with min/max labels
- Drag the slider, number updates in real-time
- "CHECK" button

Animation:

- Number scrolls (like odometer) as slider moves
- On correct: green explosion at the number
- On wrong: red, shows correct value sliding to position

✏️ CARD TYPE 8: FILL IN THE BLANK

Purpose: Active recall.

Layout:

- Sentence with a blank: "The ___ pattern combines reasoning and acting in a loop."
- Word bank below: tappable chips ["Chain", "ReAct", "Tree", "Loop"]
- Tap a chip: it animates into the blank
- "CHECK" button

Animation:

- Chip slides into the blank with a snap
- Blank glows green/red based on correctness
- Wrong: chip slides back to bank

🎤 CARD TYPE 9: SPEAK / EXPLAIN OUT LOUD (Optional Mic Input)

Purpose: Force articulation, voice-based learning.

Layout:

- "Explain what an AI agent is in your own words"
- Big microphone button in center
- Tap and hold to record
- Visual sound waves while recording
- Release to submit

Animation:

- Mic button pulses when recording
- AGNI listens (head tilts, ear glows)
- After release: "Thinking..." with AGNI thinking pose
- AGNI gives feedback: "Great explanation! You got the main idea."

🤔 CARD TYPE 10: REFLECTION CARD

Purpose: Metacognition, deepen learning.

Layout:

- AGNI asks: "What was the most surprising thing you learned?"
- Free text input
- 3 quick options as chips: "Mind blown 🤯" / "Already knew it 😎" / "Need more practice 🙏"
- "SUBMIT" button

Use: Stored in user notes for later review.

💬 CARD TYPE 11: ASK AGNI CARD (Free-form Chat)

Purpose: Let user ask anything before continuing.

Layout:

- AGNI in center: “Any questions before we move on?”
- Text input at bottom
- Quick prompts as chips: “Explain simpler” / “Give me code” / “Real example” / “Quiz me again” / “Connect to my work”
- Chat bubbles appear above as conversation grows
- “SKIP” button to continue

Interaction:

- Type or tap a chip → AI responds via streaming text
- AGNI’s mouth animates while AI talks
- Conversation history saved
- “I’m ready, let’s continue” button to advance

🎉 CARD TYPE 12: LESSON COMPLETE CARD

Purpose: Massive dopamine hit.

Layout:

- Full-screen golden gradient
- AGNI in CELEBRATING pose, jumping
- Confetti raining
- “LESSON COMPLETE!” in 36px ExtraBold gold
- Stats:
  - “+60 XP” (counts up from 0 with animation)
  - “Accuracy: 95%”
  - Stars: ⭐⭐⭐ appearing one by one with pop sound
- “CONTINUE” button at bottom (gold)

Animations:

- Confetti bursts continuously
- AGNI dances
- Stats animate with counters
- Sound: `lesson_complete.mp3`
- Haptic: success notification

Lesson Mode Switcher (Top of Lesson)

- Horizontal scroll pill bar at top: "🧹 Simple | 🔧 Engineer | 💼 Founder | ⚡ Hacker | 🤯 Crazy | 🧠 Socratic | 🏭 Semi"
- Active mode: green pill, gold border
- **Switching modes mid-lesson:**
  - Confirmation: "Switch to [Mode]? Cards will reload."
  - All cards re-render with content adapted to that mode
  - Engineer mode adds more code cards
  - Simple mode adds more analogy cards
  - Crazy mode adds wild example cards

Hearts System

- Start with 5 hearts
- Wrong answer = -1 heart
- Run out of hearts = lesson restart OR refill with gems
- Hearts regenerate over time (1 every 30 min)
- Premium users: unlimited hearts

XP System per Lesson

- Base: 60 XP for completing
- +10 XP per correct answer (no hints)
- +20 XP for 100% accuracy

- 2x XP weekend (random events)

PAGE 6: AI TUTOR CHAT (Standalone Mode)

Purpose: Free-form chat with AGNI outside of lessons. Accessible from a floating button on home, or by long-pressing AGNI on the path.

Layout

- Full-screen overlay slides up from bottom
- AGNI's head visible at top in circular avatar
- Chat area in middle
- Input at bottom

Header

- AGNI avatar with green online dot
- "AGENT SENSEI" title
- Current mode indicator
- Close button (X)

Chat Bubbles

- **AGNI messages:** Left, dark background, AGNI avatar beside
- **User messages:** Right, green background, user initial avatar
- **Typing indicator:** Three bouncing dots in dark bubble
- **Streaming text:** Word by word as AI generates
- **Code blocks:** Dark inline, copyable
- **Long press message:** Options (copy, share, save, regenerate)

Input Area

- Dark input field
- Text area expands as you type (max 4 lines)

- Send button: green circle, arrow icon
- **Voice button:** Mic icon — tap to record voice
- **Image button:** Attach an image to ask about
- **Quick action chips above input:**
  - "Explain a topic"
  - "Code example"
  - "Quiz me"
  - "Project idea"
  - "Help me debug"
  - "Connect to HCL"

Special Features

- **History:** Past conversations saved, browsable
- **Bookmarked messages:** Star important AI responses
- **Export chat:** Save as PDF or markdown
- **Share insight:** Send to a friend with attribution

Animations

- Messages slide in from respective sides
- Typing indicator: dots bounce
- Streaming text: letters appear smoothly
- AGNI avatar: blinks and reacts to messages

PAGE 7: CURIOSITY SPARK PAGE 🔮

Purpose: Get inspired before learning. Explore what's possible.

Layout

Hero

- Dark gradient background
- AGNI in “thinking” pose with magnifying glass
- Title: “Curiosity Spark”
- Subtitle: “Get inspired. Get curious. Get learning.”

Category Cards (2x2 grid)

Each card is a **bold, colorful square** like the Suntera mood cards. Big, illustrated, character-driven.

Card 1: 🏭 Your Industry

- Dark teal background
- Illustration: cute factory character with smokestacks waving
- Title: “Your Industry”
- Subtitle: “AI in semiconductors & manufacturing”
- Tap → loads results

Card 2: 🌍 General

- Blue gradient background
- Illustration: globe character with eyes
- Title: “General”
- Subtitle: “What people are building”

Card 3: 🤯 Crazy Future

- Purple gradient
- Illustration: brain character with lightning
- Title: “Crazy Future”
- Subtitle: “Mind-bending stuff”

Card 4: 💼 Daily Work

- Orange gradient
- Illustration: briefcase character with arms

- Title: “Daily Work”
- Subtitle: “How agents save time”

Card Animations

- Cards enter with stagger (100ms)
- Each card has a subtle bounce continuously
- On hover: scale 1.05, illustration animates more
- On tap: card flips/expands to show results

Results View

- After tap: card expands to full screen
- Results stream in one by one
- Each result is a card with:
  - Icon for type (🔧 / 📦 / 📰 / 🎬)
  - Title (bold)
  - 1-line description
  - “Read more →” link
- **Refresh button** at top: spins the icon, fetches new results
- **Share button:** share an interesting find with a friend
- **Save to “Inspiration Board”** button (heart icon)

New Feature: Inspiration Board

- All saved curiosity finds in one place
- Pinterest-style grid
- Filter by category
- “Share Board” to social

New Feature: Daily Curiosity Push

- Notification at 9am: “Your daily Curiosity Spark is ready!”

- Opens app to a random surprising fact about AI agents
- AGNI reads it aloud (text-to-speech option)

PAGE 8: PROGRESS / ACHIEVEMENTS PAGE

Purpose: Make users feel proud of their journey.

Layout

Header

- AGNI in trophy pose
- Title: "Your Journey"
- Level indicator: large circle with level number

Personal Records (horizontal scroll)

Each record is a card (~140px wide) with:

- Illustrated character (mascot variant)
- Number badge
- Label
- Date earned

Cards:

- 🏆 **Highest League** — purple character, "Diamond"
- 🔥 **Longest Streak** — flame character, "12 days"
- 💎 **Most XP** — green character, "2,440"
- ⭐ **Perfect Lessons** — gold star character, "8"
- ⚡ **Speed** — lightning character, "1m 30s avg"
- 🧠 **Mastery** — brain character, "85%"

Weekly Activity Chart

- Vertical bar chart, 7 days
- Bars are green with rounded tops
- Today's bar: taller, animated, with floating XP number above
- Tap a bar: shows that day's lessons
- Animation: bars grow from bottom on page open

Awards Grid (4 columns)

Each badge is a circular illustrated character:

- 🌱 First Step (sprout character)
- 🔥 Streak Starter (small flame)
- 💎 Perfect Score (diamond with eyes)
- 🏗️ Builder (construction character)
- 🧠 Sensei (master character)
- 🔮 Curious (explorer character)
- ⚡ Speed Demon (lightning character)
- 🏆 Olympian (trophy with arms)
- 🎓 Graduate (graduation hat character)
- 👑 Royalty (crowned character)
- 🚀 Pioneer (rocket character)
- 🎯 Sharpshooter (target character)

Each badge:

- **Locked:** grayed out, lock overlay, "0/10"
- **Progress:** partial color, progress ring, "3/10"
- **Unlocked:** full color, glow, date earned
- **Tap:** opens detail modal with description and how to earn

Stats Section

- XP, Streak, Accuracy, Lessons Done, Hours Studied — all in cards

- Each stat has a sparkline showing trend over time

Streak Calendar

- Calendar view of the month
- Days with activity: green flame icon
- Today: highlighted
- Streak path: connected days have a glowing trail

Friends Leaderboard (NEW)

- "This Week" rankings
- User and friends listed by XP
- Profile pics + level + XP this week
- "Add Friends" button at top

Streak Celebration Modal (When Streak Increases)

- Full-screen orange/gold gradient
- AGNI with sunglasses (cool mode)
- Big number: streak count, animated counter
- Weekly streak bar at bottom showing days active
- "KEEP IT GOING!" button
- Sound: triumphant fire crackle

PAGE 9: DISCOVER / RESOURCES PAGE

Purpose: External resources, tools, repos, news.

Layout

Search Bar (top)

- Large rounded search input

- Magnifying glass icon
- Placeholder: “Search agents, tools, news…”
- On focus: green border, AGNI peeks
- Voice search button (mic)

Live Search Results

- After search: results stream in
- Loading: skeleton cards with shimmer
- Each result: card with icon, title, description, source, date
- Tap: opens in browser or in-app webview

Category Tabs (horizontal scroll)

- All / MCP / Repos / Tutorials / News / Tools / Courses / Communities
- Active: green underline animation slides between tabs

Featured Section

- “Editor’s Picks” — curated by AGNI
- Large hero card at top of each category
- Subtitle: “Why AGNI loves this”

Resource Cards

Each card has:

- Type badge (🔧 / 📦 / 📰)
- Title (white bold)
- Description (gray)
- Source domain
- Date
- Save button (bookmark icon)
- Share button

- “Stars” indicator (for repos)

New Features

- **Daily Brief:** AI-generated summary of new agent news every morning
- **Trending Now:** what’s popular this week
- **For You:** personalized recommendations based on completed lessons
- **Bookmarks:** saved resources organized by tags
- **Reading Queue:** mark to read later

Filters

- Date range (Today, Week, Month, All)
- Source type
- Reading time (Quick / Medium / Long)
- Difficulty (Beginner / Intermediate / Advanced)

PAGE 10: PROFILE / SETTINGS PAGE

Layout

Profile Header

- Large AGNI avatar (custom outfit if unlocked)
- User name (editable)
- Role / Title
- Level + XP bar
- Streak + League
- Joined date

Stats Quick View

- Lessons / Hours / Streak / Accuracy in 4 cards

Sections (Each Tappable)

1. Account

- Email
- Password (change)
- Connected accounts (Google, GitHub)
- Sign out

2. Customization

- AGNI outfit (browse unlocked cosmetics)
- Theme (Dark / Light / Auto)
- Accent color (green / blue / purple / orange)
- App icon (premium feature)

3. Learning Preferences

- Default teaching mode
- Daily goal (5/10/15/30 min)
- Difficulty preference
- Languages

4. Notifications

- Daily reminder time
- Streak warnings
- New lesson alerts
- Friend activity
- Sound on/off
- Haptics on/off

5. Privacy

- Profile visibility
- Show in leaderboards

- Data export
- Delete account

6. About

- Version
- Credits
- Changelog
- Mega Prompt (link)
- Terms / Privacy

Logout Button

- Red text at bottom
- Confirmation: AGNI looks worried, “Are you sure? I’ll miss you!”

PAGE 11: MEGA PROMPT PAGE

Purpose: Reading/reference for the system prompt.

Layout

- Dark reader theme
- Floating table of contents on right (sticky)
- Section headers in green
- Body text in white, well-spaced
- Code blocks with syntax highlighting
- Copy button on each code block

Features

- **Search within document**
- **Copy entire prompt** button (gold, sticky bottom)
- **Sections collapsible** (accordion)

- **Reading progress bar** at top
- **Bookmark sections**
- **Export as PDF**

PAGE 12: FRIENDS / SOCIAL PAGE (NEW)

Purpose: Add friends, compete, learn together.

Layout

Add Friends

- Search by username
- Invite via link
- Connect contacts

Friends List

- Avatar, name, level, current streak
- Online indicator
- “Cheer” button (sends encouragement)
- “Challenge” button (1v1 quiz battle)

Weekly Leaderboard

- Bronze / Silver / Gold / Diamond leagues
- Top 30 in your league
- You’re highlighted in the list
- League changes every Sunday
- Promotion / demotion animations

Activity Feed

- “Akash completed ‘AI Org Design’ 2 hours ago”

- “Tarun reached Level 10”
- “5 friends are on a streak today”
- React with emojis to friend activity

PAGE 13: NOTIFICATIONS PAGE

Layout

- List of recent notifications
- Grouped by today / yesterday / earlier
- Each notification: icon, title, time
- Tap: opens relevant page

Types

- 🔥 Streak warning (“Don’t lose your streak!”)
- 💎 Daily quest available
- 🏆 Friend beat your XP
- 📚 New lesson released
- 🎯 Daily goal reached
- ⭐ Badge unlocked
- 💬 New AGNI insight

PAGE 14: STORE / SHOP PAGE (Gamification)

Purpose: Spend gems on power-ups and cosmetics.

Items

- **Hearts refill** (50 gems)
- **Streak freeze** (200 gems) — saves your streak if you miss a day
- **Double XP** (100 gems) — next 30 minutes

- **AGNI outfits** (varies)
- **Theme unlocks**
- **Lesson skip** (500 gems)

Daily Deals

- Rotating offers
- Limited time
- Bundle discounts

---

7. 📚 THE LEARNING AREA — DEEP PEDAGOGICAL DESIGN

The 8-Step Lesson Pedagogy

Every lesson follows this proven learning framework:

Step 1: HOOK (Curiosity)

- Surprising fact or question
- "Did you know X?"
- Goal: make user *want* to learn

Step 2: CONTEXT (Why this matters)

- Connect to user's world (HCL, semiconductor, real life)
- "This is why this matters to you..."

Step 3: CONCEPT (Core teaching)

- Explanation in plain language
- Visual diagram if applicable
- Key terms highlighted

Step 4: EXAMPLE (Concrete instance)

- Real code, real story, real use case
- “Here’s how this works in practice…”

Step 5: PRACTICE (Active learning)

- Quiz, drag-drop, or interactive element
- Multiple attempts allowed
- Hints available (cost gems)

Step 6: APPLY (Build something)

- Mini-challenge or project step
- “Now you try…”

Step 7: REFLECT (Metacognition)

- “What surprised you?”
- “How would you use this at work?”
- Saves to user’s notes

Step 8: REWARD (Celebration)

- XP, badges, streak update
- Confetti, AGNI dance
- “Great job!”

Interactive Elements Library

Beyond the card types listed above, the learning area should support:

1. Live Code Playground

- Embedded code editor (Monaco or CodeMirror)
- User edits code in real-time
- “RUN” button executes (sandboxed)
- Output appears below
- AGNI gives hints if stuck

2. **Diagrams That Build Themselves**

- Animated whiteboard-style drawings
- Arrows draw in, boxes appear
- User can pause, replay
- Like Khan Academy meets Duolingo

3. **Decision Trees (Choose Your Own Adventure)**

- “What would you do if your agent fails this task?”
- 3 options
- Each leads to a different explanation
- Like a branching story

4. **Build-an-Agent Mini Game**

- Drag components onto a canvas
- Connect them with lines
- Press “RUN” to test
- See agent execute step by step

5. **Compare-and-Contrast**

- Two columns side by side
- Concept A vs Concept B
- Tap items to highlight
- “Which is better for this scenario?”

6. **Timeline Scrubber**

- Show evolution of agent technology over time
- Drag scrubber to see what existed when
- Highlights breakthroughs

7. **Cost Calculator**

- “How much would this agent cost to run?”
- Sliders for: model, calls per day, complexity
- Real-time cost calculation
- Compare different setups

8. **Real Agent Demo**

- Live AGNI demonstration
- “Watch me research a topic…”
- Step-by-step animation of an agent doing the thing
- User can pause/replay

9. **Quiz Battle (vs AGNI)**

- Race against AGNI to answer questions
- Visual race bar at top
- AGNI taunts: “Faster! Faster!”
- Win = bonus XP

10. **Memory Match**

- Pair concepts with definitions
- Card-flip animation
- Like the classic memory game
- Time bonus for speed

11. **Debug the Agent**

- Show broken code
- “Find the bug!”
- Tap on the wrong line
- Get explanations on each line

12. **Build a System Prompt**

- Empty text area
- Goal at top: “Make AGNI act like a sales coach”
- User writes the prompt
- AI grades it on multiple dimensions
- Suggestions for improvement

13. **Explain to a Beginner**

- “Now teach this concept to someone else”
- Voice or text input
- AGNI rates clarity
- Reinforces learning by teaching

14. **What Comes Next?**

- Show a sequence of agent actions
- “What should the agent do next?”
- Multiple choice or free response

Lesson Difficulty Adaptation

The lesson dynamically adapts based on user performance:

- **Struggling:** More hints, easier questions, more analogies, AGNI cheerleads
- **Excelling:** Harder questions, less hand-holding, bonus challenges, AGNI challenges them

“Ask Anything” Mode

At the bottom of every card, there’s a small floating “💬 Ask AGNI” button:

- Tap to open a slide-up chat
- Ask any question about the current concept
- AGNI answers in context
- Doesn’t disrupt lesson flow

- Returns to lesson when closed

Practice Mode

After completing a lesson, “Practice” unlocks:

- Replay quizzes only
- No XP, no hearts
- For mastery review
- Spaced repetition: hard cards reappear later

Mistakes Notebook

- Every wrong answer is saved to a “Mistakes” notebook
- Reviewable later
- AGNI says: “Let’s review what tripped you up”
- Re-attempt for half XP

---

8. 🎮 GAMIFICATION SYSTEMS

XP System

- Lessons: 50-200 XP each
- Quizzes within lessons: 10 XP each
- Daily goal completion: 50 XP bonus
- Perfect lesson (100% accuracy): 30 XP bonus
- 7-day streak: 100 XP bonus
- Project completion: 500 XP bonus

Levels

- Level = total XP / 500

- New level: full-screen celebration, AGNI dances, new title
- Level titles: Novice → Apprentice → Engineer → Senior → Expert → Sensei → Master → Legend

Streaks

- Increment when daily goal met
- Visualized as a flame that grows with streak length
- Lose if you miss a day (unless you have a “Streak Freeze”)
- Streak milestones: 3, 7, 14, 30, 50, 100, 365 days — each with special celebration

Hearts (Lives)

- 5 hearts max
- Lose 1 per wrong answer
- Regenerate over time (1 per 30 min)
- Refill with gems
- Premium: unlimited hearts

Gems (Currency)

- Earn by completing lessons, achievements, daily quests
- Spend on: hearts, freezes, hints, cosmetics
- Premium pack purchasable

Leagues (Weekly Competition)

- Bronze → Silver → Gold → Diamond → Legendary
- Top XP earners promoted
- Bottom demoted
- Weekly reset
- Friends visible in your league

Daily Quests

- 3 random daily challenges
- Examples: “Earn 50 XP”, “Complete 2 lessons”, “Get 5 perfect answers”
- Reward: gems + XP boost
- AGNI announces them at app open

Achievements

- 30+ unlockable badges
- Each with progression
- Display on profile

Friends

- Add friends
- See their progress
- Cheer each other
- Quiz battles
- Share achievements

---

9. 🎬 MICRO-INTERACTIONS LIBRARY

Button Press

- Scale to 0.95
- Translate Y +4px
- Shadow shrinks
- Sound: tap.mp3
- 100ms duration
- Spring back on release

Card Hover (Web)

- Scale 1.02
- Shadow grows
- 200ms

Tab Switch

- Active indicator slides between tabs (300ms ease-out)
- Content fades + slides

Modal Open

- Background darkens (opacity 0 → 0.6, 200ms)
- Modal scales from 0.9 → 1.0 with spring
- AGNI does a small wave

Modal Close

- Reverse of open
- Faster (150ms)

Toast Notification

- Slides in from top
- Pulse on appear
- Auto-dismisses after 3s
- Swipe up to dismiss

Tooltip

- Fades in with slight scale
- Arrow points to target
- 200ms

Loading Skeleton

- Dark shimmer animation
- #1A2C32 → #233D45 → #1A2C32
- Continuous

Pull to Refresh

- AGNI bounces at top as indicator
- “Pull more to refresh” text
- On release: spinner with AGNI doing flips
- Done: AGNI thumbs up

Focus States

- Green border glow
- Slight scale 1.02
- Sound: subtle click

Error State

- Shake (3 cycles, ±5px)
- Red flash
- Error icon
- Sound: wrong.mp3

Success State

- Green flash
- Checkmark animation (SVG path draw)
- AGNI happy
- Sound: correct.mp3

Number Counter

- Animates from 0 to target
- Uses easing
- Sound: subtle ticks

Confetti

- 50-100 particles
- Random colors (green, gold, blue, purple)
- Fall with gravity
- Last 2 seconds

Sparkles

- Small particles around an element
- Used for unlocks, achievements
- Fade out

---

10. ⏳ STATE MANAGEMENT (Loading/Empty/Error)

Loading States

- **Never blank screens**
- AGNI is doing something:
  - Reading a book (lessons loading)
  - Looking through binoculars (search loading)
  - Stirring a cauldron (AI thinking)
  - Tapping foot impatiently (slow load)
- Skeleton cards with shimmer
- Optimistic UI updates where possible

Empty States

- AGNI in relevant pose
- Friendly message
- Action button
- Examples:
  - “No bookmarks yet” → AGNI shrugging → “Bookmark lessons you love!” → “Browse lessons” button
  - “No friends yet” → AGNI looking around → “Find your learning buddies” → “Add friends” button
  - “No notifications” → AGNI sleeping → “All caught up!”

Error States

- AGNI looks worried
- Clear error message (no jargon)
- “Try again” button
- “Contact support” link
- Examples:
  - “Couldn’t connect” → AGNI tangled in cables → “Check your internet”
  - “Something went wrong” → AGNI scratching head → “Try again”
  - “AI is thinking too hard” → AGNI sweating → “Give it a moment”

Success States

- Green checkmark animation
- AGNI celebrates
- Brief message
- Auto-dismiss

---

11. ♿ ACCESSIBILITY

Visual

- Minimum contrast ratio 4.5:1 for text
- Color is never the only indicator (use icons + color)
- Text scales with system font size settings
- High contrast mode option

Motion

- “Reduce motion” toggle in settings
- When enabled: animations become instant or fade only
- AGNI still appears but doesn’t bounce/dance

Screen Readers

- All images have alt text
- Semantic HTML (headings, buttons, links)
- ARIA labels for icons
- AGNI’s emotion announced as text (“AGNI is happy”)

Keyboard

- Full keyboard navigation
- Tab order logical
- Visible focus indicators
- Shortcuts (Space = next, Enter = submit)

Touch

- Min target 44x44px
- No timed interactions (or pausable)

Sound

- All sounds optional
- Visual equivalents always present

---

12. 🛠️ IMPLEMENTATION ROADMAP

Phase 1: Foundation (Week 1)

1. Set up design system tokens (colors, typography, spacing) in Tailwind config
2. Build AGNI SVG component with all 8 expression states
3. Build base components: Button (3D), Card, Modal, Input, Toast
4. Set up Framer Motion for transitions
5. Set up sound system (Howler.js)
6. Set up haptics (Capacitor for mobile)

Phase 2: Home Page Path (Week 1-2)

1. Build the winding path layout (sine wave bubble positioning)
2. Build LessonBubble component with all states
3. Build path connection lines (SVG)
4. Add scroll-triggered animations
5. Add AGNI companion that follows current lesson
6. Test on mobile devices

Phase 3: Lesson System (Week 2-3)

1. Build LessonContainer (manages cards)
2. Build all 12 card types
3. Build progress bar
4. Build hearts system

5. Build XP system
6. Build celebration screen
7. Wire up to AI API for dynamic content

Phase 4: Other Pages (Week 3)

1. Curiosity page (2x2 grid + results)
2. Progress page (achievements grid + stats)
3. Discover page (search + categories)
4. Profile page
5. Auth flow

Phase 5: Social & Gamification (Week 4)

1. Friends system
2. Leagues
3. Daily quests
4. Achievements
5. Notifications

Phase 6: Polish (Week 5)

1. Sound effects
2. Haptics
3. Micro-interactions
4. Empty states
5. Error states
6. Loading states
7. Accessibility audit
8. Performance optimization

Phase 7: Launch

1. Beta test with a few HCL folks
2. Collect feedback
3. Iterate
4. Public launch

---

13. 📐 PIXEL-PERFECT CHECKLIST (Final QA)

Use this to verify the final implementation:

- Dark mode by default (#131F24 background)
- AGNI mascot visible on EVERY screen
- AGNI has 8 distinct expression states
- AGNI animates contextually (reacts to user)
- Home page is a winding bubble path (NOT a list)
- Lesson bubbles have 5 states (locked, available, in-progress, done, perfect)
- Current lesson bubble pulses
- Crown on completed lessons
- Treasure chests for projects
- Boss bubbles at module ends
- Section banners between modules
- Bottom nav is floating dark rounded bar
- All buttons have 3D shadow effect
- Buttons compress on press
- Lessons are FULL-SCREEN (not chat)
- Lessons have 8-12 cards per session
- All quiz types implemented (MCQ, drag-drop, slider, fill-blank, speak)

- Hearts system works
- XP earned animations
- Confetti on correct
- Shake on wrong
- Lesson complete celebration screen
- Streak celebration overlay
- Curiosity page with 2x2 colorful grid
- Progress page with achievement grid
- Discover page with search
- Friends system
- Leagues
- Daily quests
- Sound effects (with mute toggle)
- Haptic feedback
- Accessibility (reduced motion, screen readers)
- Loading states show AGNI doing something
- Empty states are friendly with AGNI
- Error states show AGNI worried
- All animations 60fps
- No “web page” feel anywhere
- Feels like a native app

---

14. 🎯 FINAL NOTES FOR THE BUILDER

What Makes This Different

This isn’t just “make it look like Duolingo.” Duolingo’s success isn’t visual — it’s the

psychological design of every interaction. Every pixel has a purpose. Every animation creates emotion. Every sound triggers dopamine. Every micro-celebration builds the habit loop.

The Three Things That Matter Most

1. **AGNI must feel ALIVE.** Not a static logo. A character that responds, reacts, has feelings.
2. **The path must feel like an ADVENTURE.** Not a list of items. A journey with milestones.
3. **Every action must have FEEDBACK.** Visual + audio + haptic. No silence.

The Vibe Check

After implementing, ask: "Would a 12-year-old want to play this?" If yes, you've nailed it.

If it feels like a "learning platform," you've failed. If it feels like a "game," you've succeeded.

The AI agents content is the vegetables hidden in the smoothie. Make the smoothie delicious.

📦 DELIVERABLES SUMMARY

For a complete implementation, the builder should produce:

1. **AGNI mascot SVG component** with 8 states + outfits
2. **Design system** in Tailwind config + CSS variables
3. **14 pages** as specified
4. **Component library:** LessonBubble, Card types (12), Quiz components, Modal, Button, etc.
5. **Animation system** with Framer Motion presets
6. **Sound system** with Howler.js
7. **State management** with localStorage + Supabase
8. **Routing** with React Router
9. **AI integration** for tutor chat and curiosity feed

Built for Akash @ AgentDojo. April 2026.

Now go build something AGNI would be proud of. 🤖✨
